

On discovery in catalysis

Frank Glorius^a

^a Organisch-Chemisches Institut, Westfälische Wilhelms-Universität Münster, Corrensstraße 40, 48149 Münster, Germany

Email: glorius@uni-muenster.de

Catalysis is a key technology of our modern societies, since it allows for increased levels of selectivity and efficacy of chemical transformations. While significant progress can be made by rational design or engineered step-by-step improvements, many pressing challenges in the field require the discovery of new and formerly unexpected results (**Figure 1**). Arguably, the question “How to discover?” is at the heart of the scientific process. In this talk, strategies and discoveries from the Glorius group will be discussed. Topics will include the use of N-heterocyclic carbenes (NHCs)¹ in different fields of catalysis (such as arene hydrogenation² and on-surface chemistry³) and also discovery in photocatalysis.⁴⁻⁶
